Discover practical tools and opportunities to adapt your business to a variable climate and enhance sustainability in your operations!

This workshop will focus on how agricultural businesses and individuals are adapting and innovating to achieve greater sustainability, whether through economic strategies, environmental practices, or by responding to evolving market trends.

Presentations from local producers, industry experts, and researchers will showcase the management practices they have implemented or supported to help secure their long-term sustainability. We'll highlight which practices have succeeded and explore those that presented challenges, evaluating their success based on the goals set by the innovators themselves.

Hear from experienced pastoralists, producers, and industry experts in this informative forum. They will share insights on sustainable practices and the latest technologies.

WORKSHOP

AGRICULTURE - INNOVATIONS FOR SUSTAINABLE SUCCESS

In this workshop you will discover a variety of sustainable agriculture practices within the NT agriculture industry. Learn from and network with knowledgeable practitioners and industry experts who are closely watching the sustainability space and adapting what they do to achieve sustainability within the NT. They are generously giving their time to share their outcomes with attendees.

Presentations include;

- Technologic advances and sustainable management practices in the horticulture industry with local agronomist Callum Hutcheson from EEMuirs.
- Understanding the carbon and biodiversity markets, how applicable they are in the NT with CSIRO scientist Anna Richards.
- Implementing long-term sustainable practices on pastoral properties within an industry that is known for employment challenges with pastoralist expert Suzie Shearer from CPC.
- Understand how station owner and manager Lyndee Severin is adapting their pastoral business to meet the needs of the changing industry for long term sustainability.
- Dive into examples of farming systems & considerations that apply to horticulture enterprises in the top end.
